Power Electronics Testings

PV Inverter Test Solution

www.chromaate.com
A PV system is an energy system which directly converts energy from the sunlight into electricity. Once light hits the solar cell (array), electricity is generated and the DC is collected at a PV inverter.

PV inverter is a device that changes DC power to AC power and is also a key component in PV systems. There are two main types of PV systems, Grid Connected or Off Grid. Grid connected systems are usually installed on a building and provide electricity directly into the mains supply. Off grid systems are usually used where power is required but access to a mains supply is unavailable.

Chroma provides PV inverter testing solutions based on its twenty-five years of experience in power electronics testing.

These solutions include:

1. **DC Power Supply** 62000H Series: to simulate output characteristics of the solar array. It also provides a unique feature called solar array simulation function. This function is useful for MPPT performance evaluation on PV inverter devices.

2. **Digital Power Meter/Analyzer** 66200/6630 Series: to measure PV inverter output parameters, such as V, I, P, PF, current harmonics & THD.

3. **AC Power Source** 6500/61500/61600 Series: to simulate mains power various scenarios.

4. **AC Load** 63800 Series: to sink current directly for off grid type PV inverters. The Chroma AC Source provides a voltage level as the reference for the PV inverter output. But the AC source can not sink current (energy); therefore, an external resistor is necessary for load simulation. Chroma also provides Automated Test Systems suitable for R&D, QA qualification and mass production.
Programmable DC Power Supplies
with Solar Array Simulation

Model 62000H Series

Key Features
☑ Voltage range : 0 ~600V & 1000V
☑ 3U/15kW high power density module with easy master/slave parallel operation up to 150kW
☑ Simulation of multiple solar cell material’s I-V characteristic (fill factor)
☑ Simulation of dynamic irradiation intensity and temperature level from clear day to cloud cover conditions
☑ Shadowed I-V curve output simulation
☑ Auto I-V program: 100 I-V curves & Dwell time 1-15,000s
☑ Static & dynamic MPPT efficiency test

The latest programmable solar array simulator power supply 62150H-600S&1000S released by Chroma provides simulation of Voc (open circuit voltage) up to 1000V and Isc (short circuit current) up to 25A. The 62150H provides an industry leading power density in a small 3U high package. The solar array simulator is highly stable and has a fast transient response design, which are both advantage to MPPT performance evaluation on PV inverter devices.

Static & Dynamic MPPT Efficiency Testing
The model 62150H-600S/1000S includes a graphical user Interface software through remote digital interface (USB / GPIB / Ethernet / RS232) control. The user can easily program the I-V curve of the62150H-600S/1000S as well as the I-V & P-V curve for real-time testing. In addition it will display the MPPT status for the PV inverter. Readings and the report function with real-time monitoring using the Softpanel are shown below.

High Precision Power Measurement
Digital Power Meters/Power Analyzers

Model 66200/6630 Series

Key Features
☑ Voltage : Vrms, Vpeak+, Vpeak-
☑ Current : Irms, Ipeak+, Ipeak-
☑ Power : Watts, Power Factor, VA, VAR
☑ Other : Current Harmonics & THD

Advance AC Power Sources

Model 61500/6500 Series

Key Features
☑ Output: 500VA~90KVA/0~300VAC/424VDC, 1 or 3 phase
☑ Turn on, turn off phase angle control
☑ Programmable voltage and frequency slew rate
☑ Power line disturbance simulation LIST, PULSE, STEP modes
☑ Distortion waveform editor SYNTH and INTERHAR modes
☑ Measurement for RMS Voltage, Current, Power, PF, VA, VAR, Crest factor, peak and inrush current.
☑ Standard AC source for IEC61000-3-2 testing

Programmable AC&DC Electronic Loads

Model 63800 Series

The 63800 Series AC&DC Electronic Loads are designed for testing Off-Grid Inverters. The 63800’s state of the art design uses DSP technology to simulate non-linear rectified loads with its unique RLC operating mode.

Key Features
☑ Phase: 1 or 3 (parallel)
☑ Power: 1.8KW, 3.6KW, 4.5KW
☑ Frequency: 45Hz ~ 440Hz
☑ Voltage: 50 ~ 350Vrms
☑ Power Factor: 0 ~ 1 lead or lag
☑ Crest Factor: 1.414 ~ 5
☑ Mode: CC, CR, CP, RLC

Model 63802 63803 63804
Power 1800W 3600W 4500W
Current 0 ~ 18Arms (54 Apeak, continue) 0 ~ 36Arms (108 Apeak, continue) 0 ~ 45Arms (135 Apeak, continue)
Voltage 50 ~ 350Vrms (500 Vpeak) 50 ~ 350Vrms (500 Vpeak) 50 ~ 350Vrms (500 Vpeak)
Frequency 45 ~ 440Hz, DC 45 ~ 440Hz, DC 45 ~ 440Hz, DC
High Performance Hardware Devices and Software Architecture
PV Inverter Automated Test Systems

Model 8000

1. Dummy Load & Controller
2. Monitor
3. AC Source: Chroma 6500/61500/61600 series
4. System Controller: Industrial PC
5. Digital Storage Oscilloscope: TEK DPO/TDS series
6. Digital Power Meter/Analyzer: Chroma 66200/6630 series
7. System Power Panel
8. Connecting Panel
9. DC Power Supply: 62000H series

All specifications are subject to change without notice. Please visit our website for the most up to date specifications.
**Optimized Equipment & Test Items**
The Chroma 8000 ATS is equipped with optimized standard test items for PV inverters (the Unit Under Test). It meets IEEE1547, 1547.1, UL1741, GB/T 19939, CGC/GF001 preliminary test requirements. The user is only required to define the test conditions and specifications for the standard test items to perform the test.

The optimized test item covers 5 types of power supply test requirements. The OUTPUT PERFORMANCE test verifies the output characteristics of the UUT. The INPUT CHARACTERISTIC test checks the UUT input parameters. TIMING & TRANSIENT tests the timing and transient states during protection. The PROTECTION TESTS trigger and test the protection circuit, the SPECIAL TEST provides means to test the most sophisticated UUT when unique test routines are needed.

**Output Performances**
1. Output Voltage
2. Output Current
3. Output Power
4. Output Power Factor
5. EFF (CEC/European/Conversion/Max)
6. DC injection Current
7. THD
8. Current Harmonic Test
9. Night Time Power Consumption

**Input Characteristics**
10. Input Voltage
11. Input MPPT Voltage
12. Input Current
13. Input Power
14. Input MPPT Power

**Timing & Transient**
15. OVP/UVP Trip Time
16. OFP/UFP Trip Time
17. Anti-Islanding Trip Time*
18. Re On-Grid Time

**Protection Tests**
19. OV/UV Protection
20. OF/UF Protection
21. Anti-islanding*

**Special Tests**
22. MPPT Efficiency
23. MPPT Time
24. MPPT Record
25. RS232/485/CAN communication

*Simulate loss of utility only

---

**Software Platform of ATS**
The Model 8000 Test Systems include the industries most sophisticated power supply testing software platform, PowerPro III. PowerPro III provides users with an open software architecture suited for a wide range of applications and devices.

Power Pro III is a Windows 98/NT/2000/XP environment, which provides necessary computer peripherals.
