# Programmable AC/DC load

## M-192, M-192A

## Basic technical data

### Programmable AC/DC load M- 192

- Resistance range from 15 Ohm to 4700 Ohm
- Resolution 0,1 Ohm to 1 Ohm
- Basic accuracy 0.1 %
- Temperature coefficient  $< 10 \text{ ppm/}^{\circ}\text{C}$
- Maximal dissipation power 3000 W
- Maximal voltage 250 V rms
- Frequency range DC to 10 kHz
- Connection 2, 4 wires
- RS-232 ( IEEE 488 optionally )

### Programmable AC/DC load M- 192A

- Resistance range from 15 Ohm to 300 kOhm
- Resolution 0,001 Ohm to 1 kOhm
- Internal voltmeter 300 V AC/DC
- Basic accuracy 0.1 %
- Temperature coefficient  $< 10 \text{ ppm/}^{\circ}\text{C}$
- Maximal dissipation power 3000 W
- Maximal voltage 250 V rms
- Frequency range DC to 10 kHz ( 1 MHz )
- Connection 2, 4 wires
- RS-232 ( IEEE 488 optionally )

## Front panel ergonomics

Programmable AC/DC loads M-192 and M-192A offers 3 kW load with electric resistance range from 15 Ohm to 300 kOhm.

Basic application fields are manufacturers of voltage sources, transformers, accumulators, AC/DC and DC/DC converters and calibration laboratories. Load is especially suitable for automated testing systems.

Front panel is divided into logical areas :

- \* output terminals field
- \* numerical keypad with cursor keys
- \* display with contact and visibility from all directions

## Rear panel with interface

Programmable AC/DC loads M-192 and M-192A offers 3 kW load with electric resistance range from 15 Ohm to 300 kOhm.

Basic application fields are manufacturers of voltage sources, transformers, accumulators, AC/DC and DC/DC convertors and calibration laboratories. Load is especially suitable for automated testing systems.

## M -192 2W / 4W Resistance function

Load display

99.864 Ω

1. Set requested value using numerical keypad or cursor keys
2. Press ENTER
3. Press ON/OFF

64 discrete values of resistance in range 15.000 to 4700 Ohm can be set

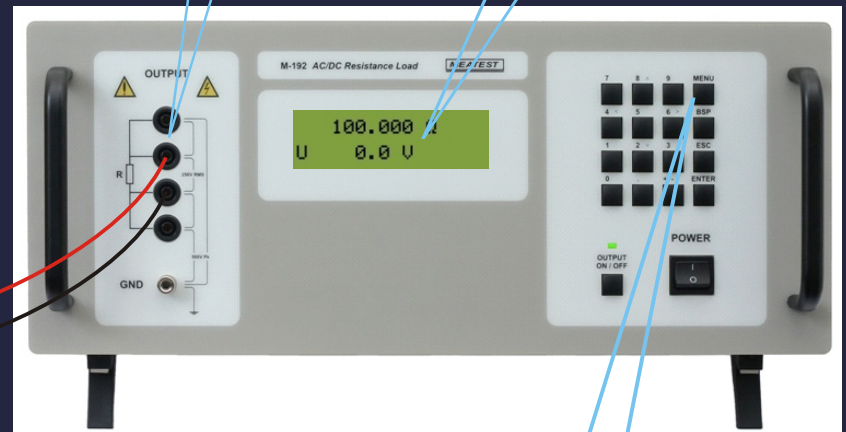

Simple connection and one touch buttons simplify two/four - terminal calibration or testing of UUTs:

- \* Connect UUT input/output to the load 2W / 4W output terminals
- \* Set requested value
- \* Press ENTER
- \* Press ON/OFF

# M -192 A

## 2W / 4W Resistance function

Load display R mode.

Output terminals  
2W / 4W

Load display

100.000 Ω  
U 0.0 V

Constant resistance mode

10.250 A  
U 0.0 V

Constant current simulated mode

1.000 kW  
U 0.0 V

Constant power simulated mode

1. Set simulated function

SETUP MENU

+Instrument +

2. Set requested value using  
numerical keypad or  
cursor keys

3. Press ENTER

4. Press ON/OFF

Any value of resistance in range 15.000 to 300 kOhm can be set

Simple connection and one touch buttons simplify  
two/four - terminal calibration or testing of UUTs:

- \* Connect UUT input/output to the load 2W / 4W output terminals
- \* Set function and requested value
- \* Press ENTER
- \* Press ON/OFF

## Load recalibration

Simple procedure of recalibration is accesible using load CALIBRATION mode:

- correct password must be entered befor calibration

Enter Password  
-----

Load display  
password mode.

- recalibration procedure consist of measuring basic resistance values and entering their actually measured data

R1 (48  $\Omega$ )  
47.97955  $\Omega$  †

Load display  
calibration mode.

- in following table nominal values of calibration points and requested recalibration accuracy are described

Standard (terminals)	Nominal value	Requested accuracy
R1	48 Ohm	10 mOhm
R2	50 Ohm	10 mOhm
R3	75 Ohm	15 mOhm
.	.	.
.	.	.
.	.	.
R24	120 MOhm	2 MOhm

## Remote control & Automatic calibration

**Programmable AC/DC load full automatic operation using remote control mode.**

Following interfaces are available for connection the load to PC:

- GPIB ( IEEE-488 ) interface. Connector is located on the rear panel  
National instruments GPIB card is requested to be installed in the computer.
- RS-232 serial line. connector is located on the rear panel.
- USB interface using RS-232-USB converter

**Load can be applied in systems for automatic and semiautomatic testing and calibration of UUTs:**

- by user created application SW, using control commands SCPI
- using Meatest CALIBER application SW

**CALIBER application software for automatic and semiautomatic calibration of meters of electric quantities.**

**CALIBER application software is based on instrument cards. Basic instrument card are delivered with decades, however new card be created by calibration laboratory.**

- output from the CALIBER is list of calibration points with measured and evaluated results including uncertainty of calibration
- calibration procedures can be easily created by calibration laboratory

## Ordering information - options

### Programmable AC/DC load M-192 / M-192A

**M192-Vxxxx** - basic version ( 15 ohm - 4700 Ohm )

**M192A-Vxxxx** - extended version ( 15 Ohm - 300 kOhm )

#### *Remote control*

**M192-V0xxx** - RS-232

**M192-V2xxx** - IEEE488

#### *Housing*

**M192-Vxxx0** - table version

**M192-Vxx1x** - module 19" , 4HE

#### *Example of the order*

**M192A-V2000** - resistance load 15Ohm - 300 kOhm, IEEE488 bus, table version
